

ABSTRACT OF THE DISCLOSURE

Collapsible structures are provided that have an enclosed interior space that can be
5 used to hold and contain water or other matter. The interior space is defined by an
enclosing wall and a base that are both waterproof to prevent leakage of the water or
matter contained in the interior space. None, one or more foldable frame members
can be provided as part of the enclosing wall and the base, or a foldable frame
member can be provided as part of a rim member. The frame members allow the
10 resulting structure to be twisted and folded to reduce the overall size of the structure.
